

Now Open: Seeking participants with CDKL5 Deficiency Disorder (CDD) or Duplication 15q syndrome (Dup15q) for a new clinical study.

ARCADE will assess the effect of *Soticlestat*, an investigational medicine, on the frequency of seizures in participants with CDKL5 deficiency disorder (CDD) or duplication 15q syndrome (Dup15q). The study will also examine the safety and tolerability of *Soticlestat* and how it works within the body.

To learn more about participating in the ARCADE clinical trial, please contact a site near you.

More information about this clinical trial can be found on [ClinicalTrials.Gov](https://clinicaltrials.gov):
